U-SUP-ZPM-EN5.1

### Preface

Thank you for purchasing Ultrasonic level transmitter. Please read this manual carefully before operating and using it correctly to avoid unnecessary losses caused by false operation.

### Note

- Modification of this manual's contents will not be notified as a result of some factors, such as function upgrading.
- We try our best to guarantee that the manual content is accurate, if you find something wrong or incorrect, please contact us.
- This product is forbidden to use in explosion-proof occasions.

### **Chapter 1 Introduction**

Ultrasonic level meter is a universal level meter that has the advantages of various other level gauges to realize a fully digital and humanized design. It has perfect level measurement and control, data transmission and man-machine communication functions. This product adopts modular circuit design, military-quality multi-layer PCB board, tight hardware structure and reasonable layout. This product supports isolated 4 ~ 20mA, HART output. This product uses imported industrial-grade chips, digital temperature compensation and other related special integrated circuits. It has strong anti-interference ability, and can set upper and lower limit, online output adjustment arbitrarily, and has local display. The shell is made of engineering plastic ABS waterproof shell. The shell is small and quite sturdy. This product can meet most of the measurement requirements of liquid level and material level without contacting industrial media, completely solves the shortcomings of winding, clogging, leakage, medium corrosion, and inconvenient maintenance caused by traditional measurement methods such as pressure type, capacitance type, and float type level meter. Therefore, it can be widely used in various fields related to material level and liquid level measurement and control.

### **Chapter 2 Characteristics**

- Wide work voltage
- Backup and recovery parameter set
- Free adjustment of the range of analog output
- Set a filter value to remove
- Custom serial port data format
- Capable with 2-/3-/4-Wire
- Optional increment/difference distance measurement to measure air space
  or liquid level
- 1-15 transmitted pulse intensity depending on working conditions

## **Chapter 3 Parameter**

Model	ZPM
Power supply	(12~24)VDC
Range	1m,2m (optional)
Blind zone	≤0.06m (1m range) ≤0.15m (2m range)
Measure error	±0.5% F. S
Display	OLED
Display resolution	1mm
Power consumption	<1.5W
Output (optional)	(4~20)mA, RL>600Ω(Standard), current output accuracy 0.3%FS (1~5)V \ (1~10)10V RS485 HART(two wire), 3-Channel NPN
Relay output	2 relays (AC:2A 250V, DC:5A 24V)
Material	Cast aluminum, 304
Launch angle	<6°
working environment temperature	(-20~60)℃,high temperature (optional)
Protection degree	IP65, IP68 (optional)
Electrical interface	M20X1.5
Installation	M30X1.5

### **Chapter 4 Operation & setting**

The instrument is OLED display, with key operation instruction. Press A appears instruction interface. According to the instruction, operation can be work.

1: Users' manual Power on press A then press C twice enter the manual. (no password)

Table 2 Menu of 3-/4-wire ultrasonic level transmitte				
Examples of basic setup steps				
Press A to display the	The instrument is displayed as an OLED display with a key operation prompt function. Press A to display the key prompt interface, just follow the prompts. The default user password is "0000" and the administrator password is "1000"

### Chapter 5 Installation & precaution

### 5.1 Dimension

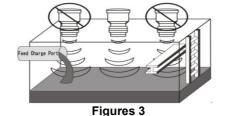

### Figures 1 Without relay output type

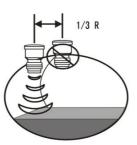

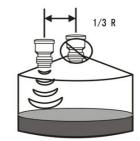

Figures 2 With relay output type

### 5.3 Sensor installation

- Sensor should be placed where there is no obstacle between emission surfaces and measured liquid, it also should be far away from feeding throats.
- Tank shape should be considered. Some type of container will bring second echo, especially conical and spherical tank. A good installation place will solve the problem.

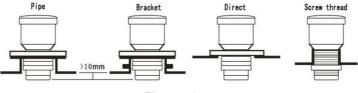

Figures 4

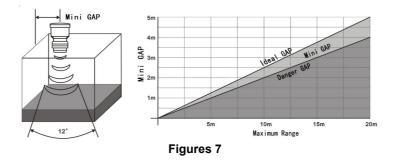

Figures 5

 Lever meter can be installed by flange or ¢61 hole, whatever installation way, make sure the sensor bottom through the installation hole or flange,.

Figures 6

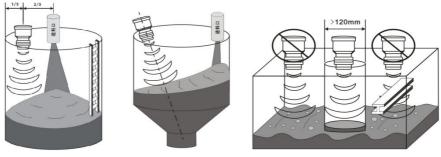

• If the liquid to be measured has sewage, afloat impurities or fluctuation, use a waveguide and the diameter of the waveguide should over 120mm, chart 5

 In the measurement of solid materials, the probe needs to be typically installed at a distance from the side wall 1/3 of the container wall to the center feed inlet. When the material piles up, it will form a cone. The installation positions of the probes shown in Figures 6 and 7 will give a reading of the average level. This average level is the level height when the material is leveled. This is true for conical stacking or concave stacking surfaces that occur during unloading.

The average level height measured by this installation is only correct for cylindrical containers and the inlet is at the centerline of the container. For containers of other shapes or feed ports that are not in the middle, the installation of the probe should be in accordance with the requirements of the user and should meet the foregoing requirements.

• For a liquid with a calm surface without waves, ultrasonic measurement will obtain the best results. If there are debris, bubbles or large fluctuations on the surface of the liquid, a wave guide should be installed. The diameter of the waveguide should be greater than 120mm, and there is no joint. As shown in Figure 8

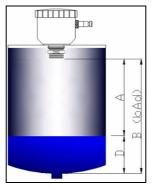

Figures 8

5.4 Work mode

Figures 11

• Measure liquid level

B (Installation Height) is the distance from bottom of container to sensor surface, A is the distance between sensor surface and liquid surface, D is the height of liquid, D=B (Installation Height) -A, display value is bottom of container to liquid surface (D).

Measure air distance

Set BD =0, display value is distance from sensor surface to liquid surface (A).

### 5.5 Environment and Filtering

This instrument default dynamic filtering, to avoid the filter interference of mixing, tank walls, and other fixed bars. But for totally enclosed small space or other easily formed secondary echo environment, it's not reliable. When the display value is about twice the actual value regularly, change **"Environment" to "Closed**".

#### 5.6 Power supply

DC 24V power is better. When it's from switch power, the DC negative must contact ground. Refer to the tags attached on the instrument for wiring. In order to keep it working reliable and display precise, please electrify >15 minutes before work. When operated outdoors, it should be placed under a sun screen to avoid direct under sunshine and rain. Lightning proof measures should also be taken out door.

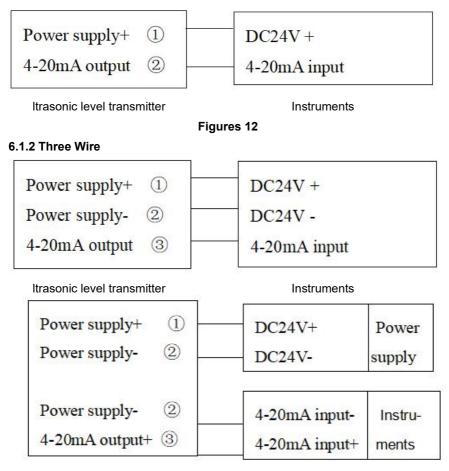

### **Chapter 6 Wiring**

When wiring, the number on the terminals are correspond to the number on the label (more details see 6.4.1 and 6.4.2)

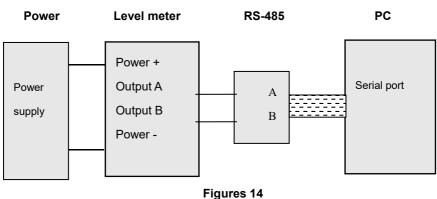

Wiring diagram of current (voltage) output connecting with secondary instrument.

### 6.1 Wiring

### 6.1.1 Two wire

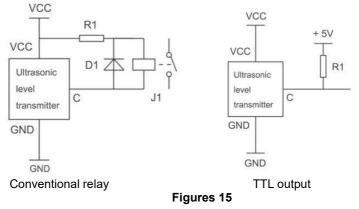

Figures 13

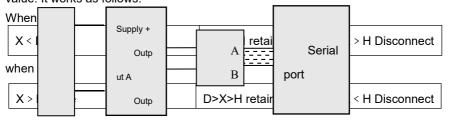

#### 6.2 Serial output connecting with PC

### Relay output setting:

This instrument has 2 relays or 3 NPN output. When uses relay control, it must be set control point: D and H. D for relay start point, H for relay end point. X for display value. It works as follows:

### 6.4 Wiring definition

### 6.4.1 Definition of three (four) wire system wiring

Please follow the logo characters on the terminal of the machine to connect !!!

Table 6

Wiring definition	Terminal	Equipped	
	Build in battery		
Power Supply	① DC12~24V+		
	② DC12~24V-		
Current output	③ 4~20mA+ (3-wire system)		
Voltage output	④ □0~5V□0~10V□others		
Serial output	④ RS485(A)		
Senai output	⑤ RS485(B)		
	5 N1		
NPN switch output	④ N2		
	③ N3		

### 6.4.2 Definition of two wire system wiring

Table 7

Wiring definition	Terminal	Equipped
Power Supply	① DC18~28V	
Current output	② 4~20mA	
	2 HART	

### **Chapter 7 Troubleshooting**

#### 1. Not working, no display, no sound

Possible reasons:

① Power is not connected or "+""-"polarities are connected reversely

② Too low voltage resulting no working or too high resulting damage

Solutions:

- ① Check to ensure correct wiring as instructed.
- ② Use 12-24V DC supply, or contact with distributor

#### 2. No display, sensor has sound

Possible reasons:

- ① Turning off
- 2 Connected to high voltage, damaging display chip

Solutions:

- 1) Press "B" to turn on display;
- (2) contact with distributor.

#### 3. With sound and display, but the values not change with distance

Possible reasons:

- ③ Too low input voltage
- ④ Sensor or power driver damaged

Solutions:

- ③ 12-24V DC supply
- (4) Contact with distributor

#### 4. With display ,but value is irregular fluctuation

Possible reasons:

- ① Deflective installation
- ② improper setting of pulse intensity, leading to great residual vibration or diffraction
- ③ more than 2 instruments work together, interfering each other
- ④ too much electromagnetic disturbance in working area

(5) There are bubbles or debris on liquid				
Solutions:				
① Adjust the axis of sensor vertical to surface to be measured				
② in general, range of 1-3m, transmit intensity is 2-5				
③ try to eliminate interference				
④ find out disturbance source and shield				
5 eliminate bubbles or debris				
5. Big error				
Possible reasons:				
6 Non vertical installation, leading to multiple reflection				
T installed too close to wall, sonic wave reflected midway				
⑧ check "BD"				
④ check temperature display				
Solutions:				
① Adjust installation positions several times.				
② correctly set "BD"				
③ adjust temperature (" <b>TE</b> ") to proper value.				
6. Abnormal current output				
Possible reasons:				
① Too large load resistance				
② FS, AL or AH changed.				
③ undesired supply rectification and filtering				
④ electrify time is not enough				
Solutions:				
① Lower load resistance				
② readjust parameter				
③ replace with DC regulated supply with larger capacity				
④ electrify >15 minutes before work				
7. Abnormal RS485 output				

Possible reasons:

1 Reverse connecting of A and B

2 incorrect parameter of serial ports, its not match with main uni

Solutions:

① Change wiring,

② reset parameter, same with main unit

#### 8. Abnormal control output

Possible reasons:

①Wrong parameter. Setting

2 external current-limiting resistor too large

③external current-limiting resistor too small, damaging the level meter

Solutions:

①Reset parameter

2)decrease current-limiting resistor

3 contact with distributor

### **Chapter 8 Warranty & After-sales Service**

We promise to the customer that the hardware accessories provided during the supply of the instrument have no defects in material and manufacturing process. From the date of the purchase, if the user's notice of such defects is received during the warranty period, the company will unconditionally maintain or replace the defective products without charge, and all non customized products are guaranteed to be returned and replaced within 7 days.

#### Disclaimers:

- During the warranty period, product faults caused by the following reasons are not in the scope of Three Guarantees service
- Product faults caused by improper use by customers.
- Product faults caused by disassembling, repairing and refitting the product.

After-sales service commitment:

- We promise to deal with the customer's technical questions within 2 hours.
- For the instruments returned to the factory for maintenance, we promise to issue the test results within 3 working days and the maintenance results within 7 working days after receiving them.
